

Decoding the DNA of the FIFA World Cup

The Global Tension Engine

June 2026

73% of adults feel 'overwhelmed' by world crises. Yet this month, billions of them will voluntarily opt in to the stress of the World Cup

The DNA of Growth: Why chose stress?

For decades, marketers have approached the World Cup with a playbook of "Joy," "Unity," and "Celebration"

But in 2026, we are living through a state of chronic macro-stress – a messy, isolating "Me-Distress" that we can neither control nor switch off

Ironically, in this landscape, we've stopped watching to de-stress, instead watching to trade bad stress for good. The World Cup is a time-bound ecosystem with clear rules and a guaranteed resolution

It's an exhilarating, collective stress. It's cathartic. We are seeking out "stress" to save our sanity

Welcome to the era of **choosing stress**

So what?

The most successful brands aren't focusing on trying to dampen the tension any more

Instead, they recognise the World Cup – and sport more generally – as the psychological relief valve it is

Want to unlock your brand growth in sports?
Facilitate the scream

DRIVERS (MOTIVATION)

Winning with fans

Why does a ball crossing a line trigger a physiological response equivalent to a cardiovascular workout? Why do we seek out the "watch-between-your-fingers" jeopardy of a penalty shootout? Why do we feel such a sense of shared identity with millions of strangers?

Our research into the drivers of fandom reveals that our obsession with sport is underpinned by a set of **8 deep-seated motivations**. To win with fans, brands must first **decode the hidden story of why they are really watching**

ENABLERS (OPPORTUNITY)

The infrastructure of intensity

The FWC 2026 is an Infrastructure of Intensity. With 48 teams and 104 matches, the environment ensures there is no "off-switch" for the tension

It turns **"Me-Distress" into "We-Eustress"**, provides a constant stream of high stakes content and enables a state of Inter-Brain Synchrony

For brands, the opportunity is about **leaning into this intensity**

ABILITIES (PSYCHOLOGY & SKILL)

The pleasure of suffering

Seeking out stress on purpose sounds irrational, but it is a highly developed psychological skill known as **"Benign Masochism"**

As Yale psychologist Paul Bloom explores, humans have the unique ability to **seek out intense emotions in safe environments** to achieve a sense of **mastery and neurochemical reward**

For the modern fan, the ability to "micro-dose" this chosen stress is an essential mechanism for **building resilience in a chaotic world**

We decode the DNA of human behaviour to unlock transformative growth. Our evidence-based model reveals the hidden forces behind consumer choices by diagnosing their **Drivers** (hidden motivations), **enablers** (environmental context), and **Abilities** (knowledge and associations) to translate deep insight into concrete brand action
